

With Film on glass panels

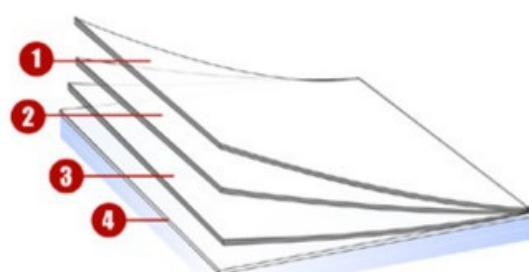

Without Film on glass panels

Polarizing Film

Eclipse Polarizing Film is a tinted privacy film for glass walls that shields data on digital screens* from prying eyes, yet maintains the transparency of the glass. Outsiders looking into the room see just a black screen, while those in the room can work freely with peace of mind.

*Includes most LCD, LED and Plasma displays, but subject to onsite testing.

Construction

1. Scratch-resistant top coating
2. Polarizing film with PVA layer
3. Multi-layered adhesive structure
4. Silicone based adhesive

Specifications

Thickness	0.195mm
Operation Mode	Does not require power supply
Maximum Size	1,430mm(W) x 3,000mm(H)
Optical Properties (Haze Meter)	
• Visible Light Transmittance	~60%
• Haze	~5%
• View Angle	160°
Operation Temperature	-10~60°C

Maintenance

To preserve the clarity, performance, and pristine finish of your Eclipse Q Series Polarizing Film, we recommend the following care practices:

- Clean the film surface gently using 95% alcohol and a clean, soft cloth.
- Avoid the use of acidic or alkaline cleaning agents, as these may compromise the film's protective layers.
- Do not use abrasive tools or hard objects when cleaning, to prevent surface damage or scratches.

Warranty:
2 years
