## The Problem

- Slip and fall accidents are the most common cause of workplace injuries in Singapore. In 2016, it was the top leading workplace hazard affecting over 3,000 employees, contributing 29% of major injuries and 27% of minor injuries.
- Besides sprains and strains, slips and falls can cause more serious injuries like fractures, head injuries and paralysis.
- Slips and falls are the fourth leading cause of workplace fatal injuries/accidental death in 2016, with 6 fatal injuries.
- Under the Ministry of Manpower's Work Injury Compensation Act (WICA), employers are liable to compensate workers should they slip and fall within company premises.

## The Solution

The Workplace Safety and Health Council recommends using **slip-resistant treatments** on an existing walking surface as a measure to reduce its slip potential.

No Skidding® Anti-Slip Treatments is a clear chemical treatment designed to increase the friction co-efficient of **slippery-when-wet surfaces**. The wetter the floor, the more effective the slip resistance.

**No Skidding® Industrial (Product 90378):** Ceramic, granite, terrazzo, slate, and most natural unsealed stone surfaces.

**No Skidding® Porcelain (Product 80378):** Porcelain tile and other delicate mineral based surfaces.

**No Skidding® Concrete (Product 50378):** Unsealed concrete and other cementitious floors.

*\* Effective cleaning and maintenance is recommended to prolong the effectiveness of the treatments.*

## Typical Applications

- Hotels, resorts, shopping malls, restaurants, fast food chains
- Hospitals, schools, office buildings, airport terminals
- Light industrial manufacturing, food processing plants
- Condominiums, nursing homes, senior care facilities
- Swimming pool decks, shower areas
- Any hard tile surface where slip accidents may occur due to slippery-when-wet conditions
